

POCKETSMART AI

Software and Hardware Requirements

1. Software Requirements

The PocketSmart AI application uses Python as the primary programming language. FastAPI is used to develop the backend web application. HTML, CSS, and JavaScript are used for the user interface.

The application uses SQLite for database storage and SQLAlchemy for database interaction. Google Gemini API is used for Generative AI functionality. Uvicorn is used to run the FastAPI application.

The development environment can include Visual Studio Code, Git, GitHub, and a modern web browser.

2. Software List

- Python
- FastAPI
- Uvicorn
- HTML
- CSS
- JavaScript
- SQLite
- SQLAlchemy
- Google Gemini API
- Visual Studio Code
- Git
- GitHub
- Render

3. Hardware Requirements

A computer or laptop with a modern processor, at least 4 GB of RAM, sufficient storage space, and an internet connection is recommended for development and testing.

4. Hardware List

- Computer or laptop
- Modern processor
- Minimum 4 GB RAM
- At least 10 GB available storage
- Keyboard and mouse
- Internet connection
