

POCKETSMART AI

Development Plan

1. Project Setup

The required development environment, project folders, dependencies, and configuration files are prepared.

2. Backend Development

The FastAPI backend is developed to handle application requests and connect different modules.

3. Database Development

The database is configured to store required application information.

4. Authentication Development

Registration, login, authentication, and logout functionality are implemented.

5. Planner Development

The planner interface is developed to collect budget, room, style, and item information.

6. AI Integration

The Generative AI API is integrated with the application to generate personalized plans and recommendations.

7. Result Generation

The generated AI response is processed and displayed to the user.

8. Testing

The complete application is tested to identify and correct errors.

9. Deployment

The application is prepared for deployment and demonstration.
