

POCKETSMART AI

Data Flow Diagram

1. Introduction

The Data Flow Diagram represents how data moves through the PocketSmart AI application.

2. Level 0 Data Flow

The user provides the required information through the PocketSmart AI interface. The application processes the information and sends an appropriate request to the AI service. The generated response is then returned to the application and displayed to the user.

3. Input Data

The main input information includes:

- Budget
- Room type
- Preferred style
- Required items
- User requirements

4. Processing

The application validates the input, creates the required AI request, sends the request to the Generative AI service, receives the response, and formats the result.

5. Output Data

The main output is a personalized AI-generated plan and recommendation based on the information provided by the user.

6. Data Flow

User Input → Input Validation → Planner Module → AI Service → Generative AI → AI Response → Result Processing → User Interface
