

POCKETSMART AI

Module Design

1. Authentication Module

The Authentication Module provides user registration and login functionality. It verifies user credentials and provides access to protected application features.

2. Budget Planner Module

The Budget Planner Module accepts the user's available budget and requirements. It processes the information and prepares it for plan generation.

3. Home Planner Module

The Home Planner Module allows users to select a room, style, and required items. It combines these details with the available budget.

4. AI Recommendation Module

The AI Recommendation Module communicates with the Generative AI service. It creates a suitable prompt from the user's information and processes the generated response.

5. Database Module

The Database Module manages the storage and retrieval of required application information.

6. Result Display Module

The Result Display Module presents the generated AI plan and recommendations in an understandable format.

7. Module Interaction

The modules work together to provide a complete workflow from user input to AI-generated output
