

POCKETSMART AI

Brainstorming & Idea Prioritization

1. Introduction

PocketSmart AI is a Generative AI-based smart budget and recommendation assistant designed to help users make better decisions according to their available budget and requirements. The project was developed by identifying common problems faced by users while planning expenses and selecting suitable options.

2. Problem Identification

Many users find it difficult to plan their budget effectively because they have different requirements, limited budgets, and many choices available. Users may spend more time comparing different options and deciding which choices are suitable for their requirements.

3. Brainstorming

During the brainstorming stage, several ideas were considered for developing an AI-based application. The main ideas included a smart expense tracker, AI shopping assistant, personal budget assistant, home planning assistant, and an AI-powered recommendation system.

4. Ideas Considered

Idea 1 – Smart Expense Tracker:

This system would allow users to record and monitor their daily expenses.

Idea 2 – AI Shopping Assistant:

This system would help users identify suitable products according to their requirements.

Idea 3 – Personal Budget Assistant:

This system would help users organize their available budget and planned expenses.

Idea 4 – AI Home Planner:

This system would help users create suggestions for rooms based on budget, style, and selected items.

Idea 5 – PocketSmart AI:

This system combines intelligent budget planning and AI-powered recommendations to provide personalized suggestions.

5. Selected Idea

After analyzing the different ideas, PocketSmart AI was selected as the final project idea. The system combines budget planning with

Generative AI to provide personalized recommendations based on user input.

6. Reason for Selecting the Idea

PocketSmart AI was selected because it addresses a practical problem and provides an opportunity to demonstrate Generative AI, web development, database management, and API integration in a single application.

7. Expected Users

The system can be used by students, individuals, families, and other users who want assistance with organizing a budget and generating personalized plans.

8. Conclusion

The brainstorming and ideation phase helped identify the main problem and define PocketSmart AI as a practical Generative AI-based solution.
