

# **POCKETSMART AI**

## **Empathy Map**

### **1. Introduction**

The empathy map is used to understand the needs, expectations, thoughts, feelings, and difficulties of the target users of PocketSmart AI.

### **2. Target User**

The target user is a person who wants to plan expenses or create a suitable plan according to a specific budget and personal requirements.

### **3. What the User Says**

The user may say:

- "I have a limited budget."
- "I want to know what I can choose within my budget."
- "I need a simple planning system."
- "I want recommendations according to my requirements."

### **4. What the User Thinks**

The user may think:

- "Will my budget be enough?"
- "Which option is suitable for me?"
- "How can I organize my budget?"
- "Can AI help me create a suitable plan?"

### **5. What the User Does**

The user may search for different options, compare available choices, calculate expenses, and try to create a plan manually.

### **6. What the User Feels**

The user may feel confused when there are many choices. The user may also feel concerned about exceeding the available budget.

### **7. User Needs**

The user needs a simple, fast, understandable, and personalized system that can provide recommendations according to their budget and requirements.

## **8. User Pain Points**

The main pain points are manual calculations, difficulty comparing choices, lack of personalized recommendations, and difficulty creating a complete plan.

## **9. User Goals**

The main goal is to create a suitable plan within the available budget with minimum effort.
